2017 Medicaid Provider Rate Review Analysis Report

Physician Services, Surgery, and Anesthesia

Appendix D – Access Data Book

The following document shows supporting graphics related to the access analysis for the 2017 Medicaid Provider Rate Review Analysis Report (2017 Analysis Report). It includes provider location maps, provider trends, and each metric by region, trended, and by population for each service. Appendix D does not contain any assertions or conclusions on the sufficiency of Medicaid rates to provide adequate access to care.

COLORADO
Department of Health Care Policy & Financing

I. Appendix D – Access Data Book

For each service under review, this appendix contains the following information

Access and Utilization One Page Summary

Preliminary Access to Care Index (ACI) results are included here. For the purpose of identifying regions for potential examination, the Department attributed points to each of the 21 Health Statistics Regions (regions), based on these metrics. For all metrics except distance, the Department assigned 20 points to regions in the top quartile, 15 points to regions in the second quartile, 10 points to regions in the third quartile, and 5 points to regions in the bottom quartile. For distance, points were assigned based on the percent of the population that traveled within 30 miles, assigning 20 points to regions where this percent was above 90%, 15 points to regions between 80-90%, 10 points to regions between 70-80%, and 5 points to regions below 70%. While the total possible points a region could receive equals 100 points, no region received 20 points for all five metrics and, therefore, no region was attributed 100 points.

The one page summaries contain the resulting ACI scores, by service. They also depict service utilizers by age, gender, and population. Metric-specific charts (bottom of each page) contain circles that represent each region; where each circle falls along a continuum represents the quartile placement (or percent placement in the case of the distance metric), and therefore the score for each metric.

Provider locations

A map shows the zip code of all billing providers. The size of the blue dot indicates the number of billing providers in that zip code.

Penetration rate by region, trended, and by population

The percent of full time-equivalent (FTE) members who used the service. The bar chart shows the 21 Health Statistics Regions' penetration rate with the statewide average (dark black line) and the one standard deviation threshold (gray shaded area). Columns that appear in blue meet the threshold, those in red are below the threshold. The trend shows any changes throughout the time period, labeling the percent change from July 2014 to June 2016. The population bar chart shows the penetration rate for each population category.

Distance metric by region, trended, and by population

The distance metric is the percent of the population that traveled within 30 miles to receive services (measured in a straight line from the geographic center of the utilizer's zip code to the geographic center of the provider's zip code). The bar chart shows the 21 Health Statistics Regions' distance metric with the statewide average (dark black line) and the one standard deviation threshold (gray shaded area). Columns that appear in blue meet the threshold, those in red are above the threshold. The trend shows any changes throughout the time period, labeling the percent change from July 2014 to June 2016. The population bar chart shows the percent of each population category that traveled within 30 miles to receive the service.

Member to provider ratio by region, trended, and by population

The member to provider ratio is the ratio of FTE members compared to active providers. The bar chart shows the 21 Health Statistics Regions' member to provider ratios with the statewide average (dark black line) and the one standard deviation threshold (gray shaded area). Columns that appear in blue meet the threshold, those in red are above the threshold. The trend shows any changes throughout the time period, labeling the percent change

from July 2014 to June 2016. The population bar chart shows the member to provider ratio for each population category.

Active provider months metric by region, trended, and by population

The active provider months metric shows the average number of months that providers billed Health First Colorado, out of a possible 24 months. The bar chart shows the 21 Health Statistics Regions' average number of months with the statewide average (dark black line) and the one standard deviation threshold (gray shaded area). Columns that appear in blue meet the threshold, those in red are below the threshold. All information provided is based on member region of residence and the providers they received services from, not the provider location. The trend shows any changes throughout the time period, labeling the percent change from July 2014 to June 2016. The population bar chart shows the average number of months providers were active for each population category.

Panel size metric by region, trended, and by population

The panel size is the average number of Health First Colorado members seen per rendering provider. The bar chart shows the 21 Health Statistics Regions' average panel size with the statewide average (dark black line) and the one standard deviation threshold (gray shaded area). Columns that appear in blue meet the threshold, those in red are below the threshold. All information provided is based on member region of residence and the providers they received services from, not the provider location. The trend shows any changes throughout the time period, labeling the percent change from July 2014 to June 2016. The population bar chart shows the average panel size for each population category.
