HCPF Data Collection

Member Data - Member data is collected from the application. A variety of demographic data is collected when someone applies for benefits. The source system for this data is the Colorado Benefits Management System (CBMS).

Provider Data - When providers enroll with State programs to provide benefits they have to provide demographic and other information. The source system for this data in interChange (MMIS).

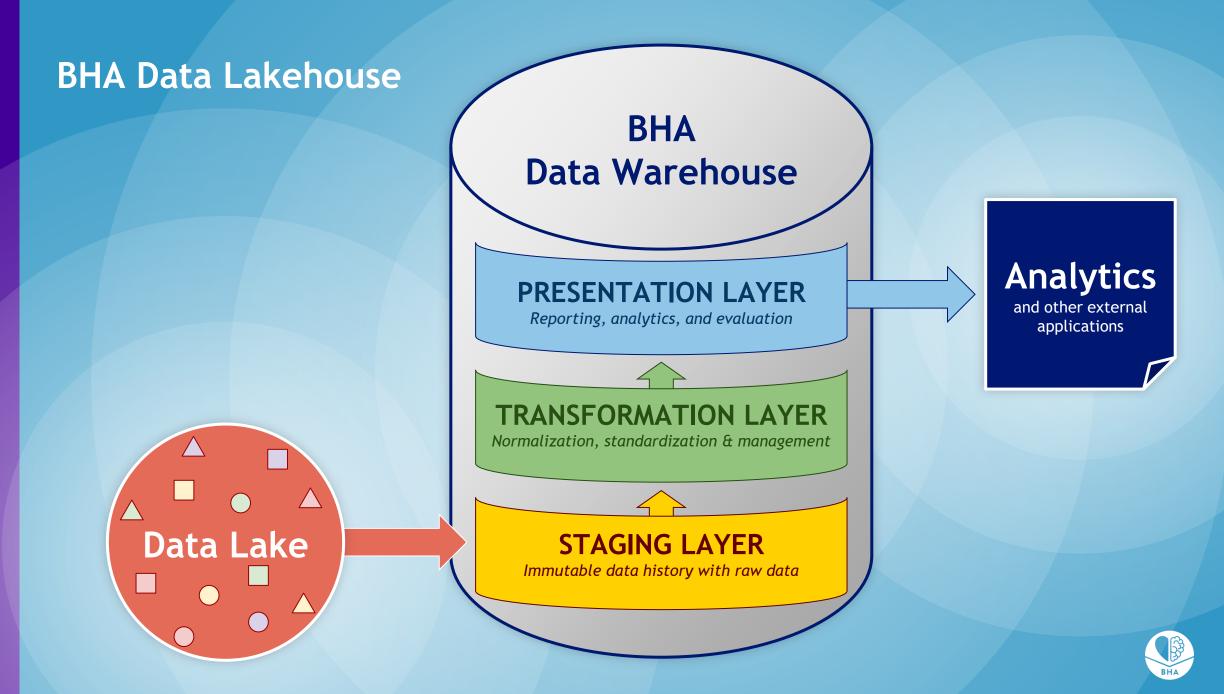

Claims/Encounter Data - Providers submit claim for services provided under fee-for-service contracts and encounter data for services provided under managed care contracts.

BHA Data Collection

- BHA will play a key role in CCBHC data collection
- Data will be stored in a secure, HIPAA-compliant Data Lakehouse structure that will facilitate analytics from multiple sources
- During the CCBHC planning phase, the data model for baseline measures will be established, and an evaluation strategy will be identified. Planning activities will include:
 - Co-developing data models for data collection with community partners
 - Finalizing cross-agency data collection and performance measurements processes

CCBHC & CO Data Collection

Current State

• BHA is actively investing in a technology stack to allow flexible data collection

Future State (Planning Activities)

• BHA and HCPF will work together to create a data collection strategy that respects privacy and minimizes provider burden

Questions/Comments from previous Forums:

Known Concerns:

- Time Commitment, resource commitment & administrative burden of systems changes for providers and State
- Potentially the most expensive implementation component
- Providers have made known their request for additional support and guidance
- How can we use this as an opportunity to align data collection efforts and systems? Can we move towards a non-duplicative system?

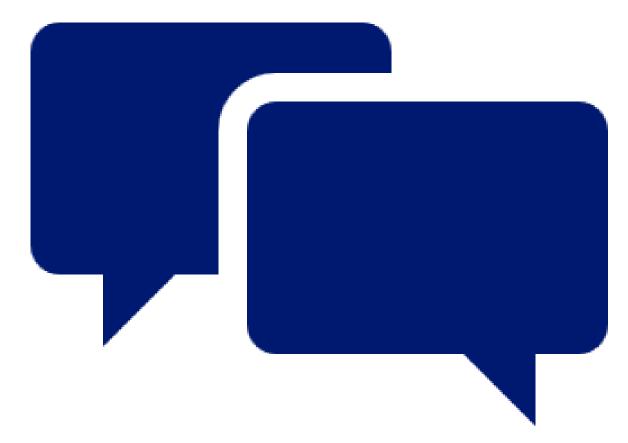

Group Discussion

 How do the reviewed Data Collection decisions align with your strategies and priorities?

• What challenges or misalignments should we be aware of?
