

HSRV 3M NATIONAL WEIGHT TABLE VER 33

Please note: The Department is considering a change to using national weights instead of the current method of creating as many weights as possible from Colorado claim data and filling in any missing weights with recalibrated national weights. Continuing discussions will occur during the bi-monthly Hospital Engagement Meetings.

This weight table is to be used for research purposes only and does not yet contain any policy-adjusted weights and/or indications of the multiplier that will be used on Hospital Base Rates to achieve budget neutrality. **To download file:** download PDF and convert to Excel if needed.

HSRV: 3M calculates two sets of national weights, "standard" and "hospital-specific relative values" (HSRV). The standard weights reflect hospital charges as a measure of resource use for each APR DRG relative to the average inpatient stay. The HSRV weights include adjustments to reduce the effect on weights of the differences among hospitals in how they set charges. On balance, 3M recommends HSRV weights as the more accurate reflection of true differences in relative resource use across APR DRGs at the national level.

This weight table was produced using proprietary computer software created, owned and licensed by the 3M Company. All copyrights in and to the 3M [APR™] Software, and to the 3M [APR™ DRG] classification system(s) (including the selection, coordination and arrangement of all codes) are owned by 3M.
