This report tells us about:

- What NCI tells us about the ability for people to access healthcare
- Why access to healthcare is important
- Where to find out more about people's ability to access healthcare in Colorado

What is NCI?

Each year, NCI asks people with intellectual and developmental disabilities (IDD) and their families how they feel about their lives and the services they get. NCI uses surveys so that the same questions can be asked to people in all NCI states.

Who is surveyed?

Each year people in many states take part in an NCI meeting. Every year a new group of people are asked to meet. During the meeting, people are asked the NCI survey questions. Questions are asked to the person who gets services from the state. For some questions, a family member, friend, or staff member who knows the person well can answer.

How are data shown?

NCI asks questions about how much people are accessing healthcare. In this report we see how people answered questions about their health, including seeing a doctor, or dentist, or eye doctor.

Each page shows a different question and the answers. Each page also has a pie graph. It shows how many people said **yes** and how many said **no**. There are also words and stick figures that show how many **yes** and **no** answers there were for each question. The answers are whole numbers (like 60% or 90%).

Due to the COVID-19 Pandemic the 2019-20 In-Person Survey (IPS) survey data collection period was unexpectedly abbreviated with all data collection stopped on April 15, 2020. At the time IPS surveying was ended, states were in many different stages of survey administration. Very few states had completed data collection.

Ultimately, NCI decided that, **to create a state report on the IPS data for a state this year, we would use a 10% Margin of Error (MoE) threshold**. This means that states will receive a state report if the number of surveys collected prior to the IPS surveying shut-down reach a threshold of 10% MoE (based on the sample frame number reported in the state work-plan).

Previous years of IPS reporting have used a 5% MoE threshold. CO conducted 304 valid surveys, the MoE is 5.54%.

For this report we round percentages to the nearest ten percent. To round, we look at the last digit in a number. If the digit is 5 or more, we “round up” to the next highest number with a zero. If the digit is 4 or less, we “round down” to the next lowest number with a zero.

For example:

If 87% of people say they have a primary care physician, we “round up” to 90%.

If 12% of people say they did not choose their primary care physician,, we “round down” to 10%.

This report can help people talk about services and supports. If you want more information, you can look up the full report at:

Making Connections – Why Is Access to Healthcare Important?

It is important for people to be able to see healthcare professionals so they can stay healthy. Healthcare professionals are people like doctors, dentists, counselors and psychologists. For people with disabilities, it is important to feel comfortable seeing and talking to healthcare professionals. ¹

Healthcare access

NCI asks questions about how often people get regular health screenings and exams.

Do you have a primary care doctor or primary care practitioner?

NCI tells us **10** out of every **10** people **have** a **primary care doctor or primary care practitioner.**

Did you have an annual physical exam in the past year?

NCI tells us **9** out of every **10** people **had** an annual physical exam in the past year.

Did you have a routine dental exam in the past year?

NCI tells us **9** out of every **10** people **had a routine dental exam in the past year.**

Did you have an eye exam or vision screening in the past year?

NCI tells us **8** out of every **10** people had an eye exam or vision screening in the past year.

Did you have a hearing test in the past five years?

NCI tells us **6** out of every **10** people said **had a hearing test in the past five years.**

Did you have a flu vaccination in the past year?

NCI tells us **7** out of every **10** people said they **had a flu vaccination in the past year.**

What Did We Learn?

NCI tell us about people in Colorado:

99% Have a primary care doctor or primary care practitioner

94% Had an annual physical exam in the past year

87% Had a routine dental exam in the past year

75% Had an eye exam or vision screening in the past year

57% Had a hearing test in the past five years

74% Had a flu vaccination in the past year
