## 1. Executive Summary

The Code of Federal Regulations at 42 CFR Parts 438 and 457—managed care regulations for Medicaid and the Children’s Health Insurance Program (CHIP), with revisions released May 6, 2016, and effective July 1, 2017, for Medicaid managed care and July 1, 2018, for CHIP managed care require states that contract with managed care health plans (health plans) to conduct an external quality review (EQR) of each contracting health plan. Health plans include managed care organizations (MCOs), prepaid inpatient health plans (PIHPs), primary care case management entities (PCCM entities), and prepaid ambulatory health plans (PAHPs). The regulations at 42 CFR §438.350 require that the EQR include, conducted by an external quality review organization (EQRO), analysis and evaluation of aggregated information on healthcare quality, timeliness, and access. Health Services Advisory Group, Inc. (HSAG) serves as the EQRO for the State of Colorado, Department of Health Care Policy and Financing (the Department)—the agency responsible for the overall administration and monitoring of Colorado’s Medicaid managed care program and Child Health Plan *Plus* (CHP+), Colorado’s program to implement CHIP managed care.

Pursuant to 42 CFR §457.1250, which requires states’ CHIP managed care programs to participate in EQR, the Department required its CHP+ health plans to conduct and submit performance improvement projects (PIPs) annually for validation by the state’s EQRO. **Rocky Mountain Health Plans (RMHP)**, an MCO, holds the contract with the State of Colorado for provision of medical and behavioral health services for the Department’s CHP+ managed care program.

For fiscal year (FY) 2019–2020, the Department required health plans to conduct PIPs in accordance with 42 CFR §438.330(b)(1) and §438.330(d)(2)(i-iv), and each PIP must include:

- Measurement of performance using objective quality indicators.
- Implementation of systematic interventions to achieve improvement in quality.
- Evaluation of the effectiveness of the interventions.
- Planning and initiation of activities for increasing or sustaining improvement.

As one of the mandatory EQR activities required by 42 CFR §438.358(b)(1)(i), HSAG, as the State’s EQRO, validated the PIPs through an independent review process. In its PIP evaluation and validation, HSAG used the Department of Health and Human Services, Centers for Medicare & Medicaid Services (CMS) publication, *EQR Protocol 3: Validating Performance Improvement Projects (PIPs): A Mandatory Protocol for External Quality Review (EQR)*, Version 2.0, September 2012.<sup>1-1</sup>

---

<sup>1-1</sup> Department of Health and Human Services, Centers for Medicare & Medicaid Services. *EQR Protocol 3: Validating Performance Improvement Projects (PIPs): A Mandatory Protocol for External Quality Review (EQR)*, Version 2.0, September 2012. Available at: <https://www.medicaid.gov/medicaid/quality-of-care/medicaid-managed-care/external-quality-review/index.html>. Accessed on: January 27, 2020.

Over time, HSAG and some of its contracted states identified that while the MCOs had designed methodologically valid projects and received *Met* validation scores by complying with documentation requirements, few MCOs had achieved real and sustained improvement. In July 2014, HSAG developed a new PIP framework based on a modified version of the Model for Improvement developed by Associates in Process Improvement and modified by the Institute for Healthcare Improvement.<sup>1-2</sup> The redesigned PIP methodology is intended to improve processes and outcomes of healthcare by way of continuous quality improvement. The redesigned framework redirects MCOs to focus on small tests of change to determine which interventions have the greatest impact and can bring about real improvement. PIPs must meet CMS requirements; therefore, HSAG completed a crosswalk of this new framework against the Department of Health and Human Services CMS publication, *EQR Protocol 3: Validating Performance Improvement Projects (PIPs): A Mandatory Protocol for External Quality Review (EQR)*, Version 2.0, September 2012.

HSAG presented the crosswalk and new PIP framework components to CMS to demonstrate how the new PIP framework aligned with the CMS validation protocols. CMS agreed that given the pace of quality improvement science development and the prolific use of Plan-Do-Study-Act (PDSA) cycles in modern improvement projects within healthcare settings, a new approach was needed.

## PIP Components and Process

The key concepts of the new PIP framework include forming a PIP team, setting aims, establishing a measure, determining interventions, testing interventions, and spreading successful changes. The core component of the new approach involves testing changes on a small scale—using a series of PDSA cycles and applying rapid-cycle learning principles over the course of the improvement project to adjust intervention strategies—so that improvement can occur more efficiently and lead to long-term sustainability. The duration of rapid-cycle PIPs is 18 months.

### PIP Terms

**SMART** (Specific, Measurable, Attainable, Relevant, Time-bound) Aim directly measures the PIP's outcome by answering the following: *How much improvement, to what, for whom, and by when?*

**Key Driver Diagram** is a tool used to conceptualize a shared vision of the theory of change in the system. It enables the MCO's team to focus on the influences in cause-and-effect relationships in complex systems.

**FMEA** (Failure Modes and Effects Analysis) is a systematic, proactive method for evaluating processes that helps to identify where and how a process is failing or might fail in the future. FMEA is useful to pinpoint specific steps most likely to affect the overall process, so that interventions may have the desired impact on PIP outcomes.

**PDSA** (Plan-Do-Study-Act) cycle follows a systematic series of steps for gaining knowledge about how to improve a process or an outcome.

<sup>1-2</sup> Langley GL, Moen R, Nolan KM, Nolan TW, Norman CL, Provost LP. *The Improvement Guide: A Practical Approach to Enhancing Organizational Performance* (2nd edition). San Francisco: Jossey-Bass Publishers; 2009. Available at: <http://www.ihl.org/resources/Pages/HowtoImprove/default.aspx>. Accessed on: February 6, 2020.

For this PIP framework, HSAG developed five modules with an accompanying reference guide. Prior to issuing each module, HSAG held technical assistance sessions with the MCOs to educate about application of the modules. The five modules are defined as:

- **Module 1—PIP Initiation:** Module 1 outlines the framework for the project. The framework includes the topic rationale and supporting data, building a PIP team, setting aims (Global and SMART), and completing a key driver diagram.
- **Module 2—SMART Aim Data Collection:** In Module 2, the SMART Aim measure is operationalized and the data collection methodology is described. SMART Aim data are displayed using a run chart.
- **Module 3—Intervention Determination:** In Module 3, there is increased focus into the quality improvement activities reasonably thought to impact the SMART Aim. Interventions in addition to those in the original key driver diagram are identified using tools such as process mapping, failure modes and effects analysis (FMEA), and failure mode priority ranking, for testing via PDSA cycles in Module 4.
- **Module 4—Plan-Do-Study-Act:** The interventions selected in Module 3 are tested and evaluated through a thoughtful and incremental series of PDSA cycles.
- **Module 5—PIP Conclusions:** In Module 5, the MCO summarizes key findings and outcomes, presents comparisons of successful and unsuccessful interventions, lessons learned, and the plan to spread and sustain successful changes for improvement achieved.

## Approach to Validation

HSAG obtained the data needed to conduct the PIP validation from **RMHP**'s module submission forms. In FY 2019–2020, these forms provided detailed information about **RMHP**'s PIP and the activities completed in Module 3. (See Appendix A. Module Submission Form.)

Following HSAG's rapid-cycle PIP process, the health plan submits each module according to the approved timeline. Following the initial validation of each module, HSAG provides feedback in the validation tools. If validation criteria are not achieved, the health plan has the opportunity to seek technical assistance from HSAG. The health plan resubmits the modules until all validation criteria are met. This process ensures that the PIP methodology is sound prior to the health plan progressing to intervention testing.

The goal of HSAG's PIP validation is to ensure that the Department and key stakeholders can have confidence that any reported improvement is related to and can be directly linked to the quality improvement strategies and activities conducted by the health plan during the PIP. HSAG's scoring methodology evaluates whether the health plan executed a methodologically sound improvement project and confirms that any improvement achieved could be clearly linked to the quality improvement strategies implemented by the health plan.

## Validation Scoring

During validation, HSAG determines if criteria for each module are *Achieved*. Any validation criteria not applicable (N/A) were not scored. As the PIP progresses, and at the completion of Module 5, HSAG will use the validation findings from modules 1 through 5 for each PIP to determine a level of confidence representing the validity and reliability of the PIP. Using a standardized scoring methodology, HSAG will assign a level of confidence and report the overall validity and reliability of the findings as one of the following:

- **High confidence** = The PIP was methodologically sound, the SMART Aim was achieved, the demonstrated improvement was clearly linked to the quality improvement processes conducted and intervention(s) tested, and the MCO accurately summarized the key findings.
- **Confidence** = The PIP was methodologically sound, the SMART Aim was achieved, and the MCO accurately summarized the key findings. However, some, but not all, quality improvement processes conducted and/or intervention(s) tested were clearly linked to the demonstrated improvement.
- **Low confidence** = (A) the PIP was methodologically sound; however, the SMART Aim goal was not achieved; or (B) the SMART Aim goal was achieved; however, the quality improvement processes conducted and/or intervention(s) tested were poorly executed and could not be linked to the improvement.
- **Reported PIP results were not credible** = The PIP methodology was not executed as approved.

## PIP Topic Selection

In FY 2019–2020, **RMHP** submitted the following PIP topic for validation: *Improving Well-Child Visit (WCV) Completion Rates for Colorado Child Health Plan Plus (CHP+) Members Ages 15–18*.

**RMHP** defined a Global Aim and SMART Aim for the PIP. The SMART Aim statement includes the narrowed population, the baseline rate, a set goal for the project, and the end date. HSAG provided the following parameters to the health plan for establishing the SMART Aim for the PIP:

- **Specific**: The goal of the project: What is to be accomplished? Who will be involved or affected? Where will it take place?
- **Measurable**: The indicator to measure the goal: What is the measure that will be used? What is the current data figure (i.e., count, percent, or rate) for that measure? What do you want to increase/decrease that number to?
- **Attainable**: Rationale for setting the goal: Is the achievement you want to attain based on a particular best practice/average score/benchmark? Is the goal attainable (not too low or too high)?
- **Relevant**: The goal addresses the problem to be improved.
- **Time-bound**: The timeline for achieving the goal.

Table 1-1 includes the PIP title and SMART Aim statement selected by **RMHP**.

**Table 1-1—PIP Title and SMART Aim Statement**

PIP Title	SMART Aim Statement
<i>Improving Well-Child Visit (WCV) Completion Rates for Colorado Child Health Plan Plus (CHP+) Members Ages 15–18</i>	By June 30, 2020, increase the percentage of well-child visits among CHP+ members at Mountain Family Health Center 15 through 18 years of age, from 42.39% to 53.26%.

The focus of the PIP is to increase the rate of WCVs among members 15 through 18 years of age who receive care from the narrowed focus provider group.

Table 1-2 summarizes the PIP topic selected by **RMHP** and the progress the health plan has made in completing the five PIP modules.

**Table 1-2—PIP Title and Module Status**

PIP Title	Module	Status
<i>Improving Well-Child Visit (WCV) Completion Rates for Colorado Child Health Plan Plus (CHP+) Members Ages 15–18</i>	1. PIP Initiation	Completed and achieved all validation criteria.
	2. SMART Aim Data Collection	Completed and achieved all validation criteria.
	3. Intervention Determination	Completed and achieved all validation criteria.
	4. Plan-Do-Study-Act (PDSA)	Initiated in August 2019, with PDSA cycles continuing through SMART Aim end date of June 30, 2020.
	5. PIP Conclusions	Targeted submission for October 2020.

At the time of the FY 2019–2020 PIP validation report, **RMHP** had passed Module 1, Module 2, and Module 3, achieving all validation criteria for the PIP. **RMHP** has progressed to intervention testing in Module 4—Plan-Do-Study-Act. The final Module 4 and Module 5 submissions are targeted for October 2020; the Module 4 and Module 5 validation findings and the level of confidence assigned to the PIP will be reported in the FY 2020–2021 PIP validation report.

## 2. Findings

### Validation Findings

In FY 2019–2020, **RMHP** completed and submitted Module 3 for validation. Detailed module documentation submitted by the health plan is provided in Appendix A. Module Submission Form.

The objective of Module 3 is for the MCO to determine potential interventions for the project. In this module, the MCO asks and answers the question, “What changes can we make that will result in improvement?”

The following section outlines the validation findings for the module. Detailed validation criteria, scores, and feedback from HSAG are provided in Appendix B. Module Validation Tool.

### Module 3: Intervention Determination

**RMHP** completed a process map and an FMEA to determine the areas within its process that demonstrated the greatest need for improvement, have the most impact on the desired outcomes, and can be addressed by potential interventions. Table 2-1 summarizes the potential interventions **RMHP** identified to address high-priority subprocesses and failure modes determined in Module 3.

**Table 2-1—Module 3 Intervention Determination Summary for the *Improving Well-Child Visit (WCV) Completion Rates for Colorado Child Health Plan Plus (CHP+) Members Ages 15–18 PIP***

Failure Modes	Potential Interventions
Member attends an appointment, but the care team does not identify the needed WCV services	Ongoing compliance program including staff education and follow-up to ensure that pre-visit planning (PVP) is consistently performed and communicated to the care team
Dental or behavioral health team does not identify member due for WCV services	<ul style="list-style-type: none"> <li>Dental and behavioral health PVP development with a whole-person approach and connection to all service lines</li> <li>Inclusion in ongoing compliance program (described above)</li> </ul>
No registry for tracking WCV services available	<ul style="list-style-type: none"> <li>Registry development</li> <li>Use of registry to track targeted text message WCV reminders, incentives, and education for members</li> </ul>

At the time of this FY 2019–2020 PIP validation report, **RMHP** had completed its PIP through Module 3 and had initiated the intervention planning phase in Module 4. **RMHP** submitted one intervention plan in August 2019. Table 2-2 summarizes the intervention **RMHP** selected for testing through PDSA cycles.

**Table 2-2—Planned Intervention for the *Improving Well-Child Visit (WCV) Completion Rates for Colorado Child Health Plan Plus (CHP+) Members Ages 15–18* PIP**

Intervention Description	Key Drivers	Failure Mode
Registry-based outreach campaign to identify members due for well visits, send and track text message WCV reminders, and track scheduled and completed well visits	Ensure member knowledge of recommended annual well visit and the importance of preventative healthcare	No registry currently available to identify members due for a WCV

**RMHP** selected one intervention for testing, which had a system-focused component and a member-focused component. For the system-focused component, the health plan developed a registry to identify members 15 through 18 years of age who were due for a well visit, initiate automated text message reminders, and track scheduled and completed well visits for members in the registry. For the member-focused component, **RMHP** conducted targeted text messaging to members identified in the registry as being due for a well visit. HSAG reviewed the intervention plan and provided written feedback and technical assistance to **RMHP**. **RMHP** is currently in the “Do” stage, testing and evaluating the impact of the intervention. HSAG will report the intervention testing results and final Module 4 and Module 5 validation outcomes in the next annual PIP validation report.

## 3. Conclusions and Recommendations

### Conclusions

The validation findings suggest that **RMHP** successfully completed Module 3 and identified opportunities for improving the process related to obtaining a well visit for members 15 through 18 years of age. **RMHP** further analyzed opportunities for improvement in Module 3 and considered potential interventions to address the identified process flaws or gaps and increase the percentage of members who receive a well visit. The health plan also successfully initiated Module 4 by selecting an intervention to test and documenting a plan for evaluating the impact of the intervention through PDSA cycles. **RMHP** will continue testing interventions for the PIP through June 30, 2020. The health plan will submit complete intervention testing results and PIP conclusions for validation in FY 2020–2021. HSAG will report the final validation findings for the PIP in the FY 2020–2021 PIP validation report.

### Recommendations

- When planning a test of change, **RMHP** should clearly identify and communicate the necessary steps that will be taken to carry out an intervention including details that define who, what, where, and how the intervention will be carried out.
- To ensure a methodologically sound intervention testing methodology, **RMHP** should determine the best method for identifying the intended effect of an intervention prior to testing. Intervention testing measures and data collection methodologies should allow the health plan to rapidly determine the direct impact of the intervention. The testing methodology should allow the health plan to quickly gather data and make data-driven revisions to facilitate achievement of the SMART Aim goal.
- **RMHP** should consistently use the approved Module 2 SMART Aim measure data collection and calculation methods for the duration of the PIP so that the final SMART Aim measure run chart provides data for a valid comparison of results to the goal.
- When reporting the final PIP conclusions, **RMHP** should accurately and clearly report intervention testing results and SMART Aim measure results, communicating any evidence of improvement and demonstrating the link between intervention testing and demonstrated improvement.
- If improvement is achieved through the PIP, **RMHP** should develop a plan for continuing and spreading effective interventions and sustaining improvement in the long term.

### Process Mapping

Indicate when the process map(s) was completed and list all team Members involved. Describe the role and responsibilities for each individual team Member. The team should include a data analyst. The analyst can assist with determining data needed for prioritization of subprocesses and failure modes and proposed interventions.

Table 1—Process Mapping Team

### Process Mapping

Develop a process map that aligns with the SMART Aim measure from the perspective of the person most impacted by the overall process (typically the Member). The MCO may need to complete and submit more than one process map (i.e., Member-level, provider-level, MCO-level, new Members, existing Members, etc.).

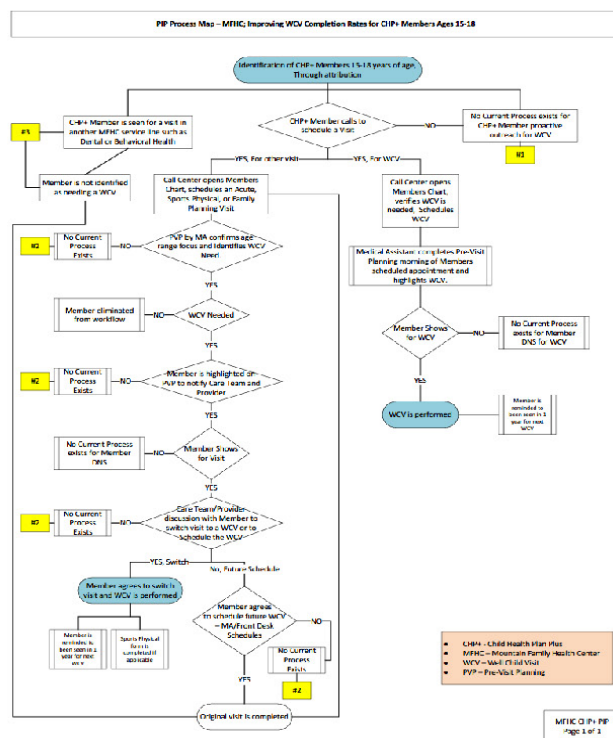

Clearly identify subprocesses (opportunities for improvement) within the process map. These subprocesses will be used in the FMEA table. Assign a numerical value to each identified subprocess based on having the greatest potential of impacting the SMART Aim. In addition to providing the process map(s), provide a narrative description of the PIP team's process and rationale for the selection of subprocesses with the greatest impact on the SMART Aim.

### Process Mapping

Develop a process map that aligns with the SMART Aim measure from the perspective of the person most impacted by the overall process (typically the Member). The MCO may need to complete and submit more than one process map (i.e., Member-level, provider-level, MCO-level, new Members, existing Members, etc.).

Clearly identify subprocesses (opportunities for improvement) within the process map. These subprocesses will be used in the FMEA table. Assign a numerical value to each identified subprocess based on having the greatest potential of impacting the SMART Aim. In addition to providing the process map(s), provide a narrative description of the PIP team's process and rationale for the selection of subprocesses with the greatest impact on the SMART Aim.

---

#### **Description of process and rationale for selection of subprocesses:**

In developing the process map, MFHC identified the following subprocesses that contain gaps and opportunities (failure modes) for process improvement and increasing completion rates for WCVs.

#1 – No proactive process is in place for outreach to Members who may need a WCV. Evaluations and comparisons have not been completed to determine if internal report development is needed or if using the attribution listing will be sufficient for this outreach. In addition, Members may not be seen in clinic for an acute visit that could be potentially switched to WCV or Member is not a very frequent utilizer of services, so does not contact clinic – this would include Members who may be attributed, but have never been seen by MFHC.

#2 – Member is seen in clinic for an acute visit, not identified initially as a WCV. It was identified that there are multiple steps within the appointment process where the WCV need could be identified, but is often missed. This would include PVP – where age and WCV need is identified, also a potential lack of notification to the Care Team, the discussion by Care Team/Provider does not occur to potential switch current visit to a WCV, and lastly the Member may not agree to schedule a future WCV.

State of Colorado

### Process Mapping

Develop a process map that aligns with the SMART Aim measure from the perspective of the person most impacted by the overall process (typically the Member). The MCO may need to complete and submit more than one process map (i.e., Member-level, provider-level, MCO-level, new Members, existing Members, etc.).

Clearly identify subprocesses (opportunities for improvement) within the process map. These subprocesses will be used in the FMEA table. Assign a numerical value to each identified subprocess based on having the greatest potential of impacting the SMART Aim. In addition to providing the process map(s), provide a narrative description of the PIP team's process and rationale for the selection of subprocesses with the greatest impact on the SMART Aim.

---

#3 – Member is seen in another service line such as Dental or Behavioral Health – it was identified that Members seen in these service lines are not identified for a WCV need. In addition, there is a gap in process to review the electronic medical record to identify appointment history.

State of Colorado  
 Performance Improvement Project (PIP)  
 Module 3 — Intervention Determination Submission  
 Improving Well-Child Visit (WCV) Completion Rates for Child  
 Health Plan Plus (CHP+) Members Ages 15–18  
 for Rocky Mountain Health Plans

### Failure Modes and Effects Analysis

From the completed process map(s), enter up to three subprocesses that have the potential to make the greatest impact on the SMART Aim. The assigned priority number in the process map should align with the subprocess number in the FMEA table. This will help clearly link each opportunity for improvement to an identified subprocess.

Complete the table with the corresponding failure modes, failure causes, and failure effects.

Note: The MCO should ensure that the same language is used consistently to describe the failure modes throughout Modules 3, 4, and 5.

**Table 3—Failure Modes and Effects Analysis Table**

Subprocesses	Failure Modes (What could go wrong?)	Failure Causes (Why would the failure happen?)	Failure Effects (What are the consequences?)
<b>1. Member is not identified for WCV</b>	Member does not call for a visit	Lack of education, lack of health need	Member does not receive WCV at this time
	Member does not come in for acute visit	Lack of education, lack of health need	Member does not receive WCV at this time
	No registry available	Lack of development, deciding on listing from RMHP or MFHC E.H.R.	Member does not receive WCV
<b>2. Member is seen in clinic but a WCV is not identified or is not scheduled for future appt.</b>	Member comes in for “visit” but the Care Team does not identify WCV need	Lack PVP, forgetting to address this in the “visit”	Member does not receive WCV at this time
	Member comes in for “visit” but the Care Team does not identify WCV need	Lack PVP, forgetting to address this in the “visit”	More difficulty in engaging and recalling Member due to just being seen otherwise and not proactively identified.

State of Colorado  
**Performance Improvement Project (PIP)**  
**Module 3 — Intervention Determination Submission**  
**Improving Well-Child Visit (WCV) Completion Rates for Child**  
**Health Plan Plus (CHP+) Members Ages 15–18**  
*for Rocky Mountain Health Plans*

	Member comes in for “visit” but does not agree to switch the current visit to a WCV or schedule a future WCV	Member non-compliance/decline services	Member is not seen for a WCV at this time.
<b>3. Member is seen in a different MFHC service line such as Dental or BH, and is not identified for a WCV</b>	Dental/BH Team does not identify Member for WCV	Not currently running PVP reports	Member is not seen for a WCV at this time.
	Dental/BH Team does not identify Member for WCV	No current process for proactive identification	Member is not seen for a WCV at this time.
	Electronic Health Record (E.H.R.) and Electronic Dental Record (E.D.R.) don’t talk well with each other, meaning that the different service line providers may not be aware of the other providers seeing Member within this organization	E.H.R. and E.D.R. don’t talk well, lack of current integrated and collaborative communication between service lines.	Member is not identified for WCV and does not receive a WCV at this time.

### Failure Mode Priority Ranking

Based on the results of the priority ranking process, list the numerically ranked failure modes from highest to lowest priority. In the space below the table, please describe the process used to assign the priority ranking.

Table 4—Failure Mode Priority Ranking	
Priority Ranking	Failure Modes
1	Member comes in for “visit” but the Care Team does not identify WCV need
2	Dental/BH Team does not identify Member for WCV
3	No Registry available
4	Member does not come in for acute visit
5	Member does not call for a visit
6	E.H.R. and E.D.R. don’t talk well with each other, meaning that the different service line providers may not be aware of the other providers seeing Member within this organization.
7	Member comes in for “visit” but does not agree to switch the current visit to a WCV or schedule a future WCV

**Description of priority ranking process (i.e., Risk Priority Number (RPN) method). If the RPN method was used, please provide the numeric values from the calculations:**

For this FMEA, the priority ranking was completed by the team subjectively. Shown in the priority ranking table as #1, Member comes in for “visit” but the Care Team does not identify WCV need. Impact to the SMART AIM is highest here as the Care Team has clear opportunity to capture the wellness visit for the patient since they are physically being seen in the clinic. Secondly as #2, the team identified that a Member who is seen in another MFHC service line such as Dental or Behavioral health, may not be identified to need a WCV. This could impact the SMART AIM with workflow adjustments and developments for PVP to ensure a whole-person approach is taken to ensure connection to all services lines and care needs. Lastly, ranking at #3, The team identified that the highest

impact on the WCV PIP Smart AIM would be a proactive approach to increase the completion of WCVs in the CHP+ Member population, thus the gap is identified as needing a registry function and reminder system to outreach patients needing their wellness visits.

### Intervention Determination

In the Intervention Determine table, enter at a minimum, the top three ranked failure modes and the identified intervention to address the failure mode.

Table 5—Intervention Determination Table	
Failure Modes	Interventions
Member comes in for “visit” but the Care Team does not identify WCV need	Create ongoing compliance program to include Staff follow up and re-education to ensure that PVP is performed and communicated to the Care Team consistently.
Dental/BH Team does not identify Member for WCV	Dental & BH PVP development to include a whole-person process and ensure connection to all service lines. Once completed, Create ongoing compliance program to include Staff follow up and re-education to ensure that PVP is performed and communicated to the Care Team consistently.
No Registry available	Proactive approaches: Registry Development, Targeted Text Message Reminders for WCV, Gift Card Incentives potential, Education development for Members

## Appendix B. Module Validation Tool

Appendix B contains the Module Validation Tool provided by HSAG.

Criteria	Achieved (Y/N)	HSAG Feedback and Recommendations
1. The documentation included the team members responsible for completing the process map(s) and failure mode and effects analysis (FMEA).	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
2. The documentation included a process map(s) illustrating the step-by-step flow of the current process. The subprocesses identified in the process map(s) as opportunities for improvement were prioritized and assigned a numerical ranking.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	HSAG identified the following opportunities for improvement: <ul style="list-style-type: none"> <li>• The health plan did not number the subprocesses on the process map that were identified as opportunities for improvement or gaps in care.</li> <li>• To align with the SMART Aim measure, it appears that the starting point for the process map should be “CHP+ members 15-18 years of age.”</li> <li>• It appears that the following steps in the process map should be decision points with yes/no options. Unless these steps occur 100% of the time in the process, the process map should include steps that follow if they do not occur or note “no process exists.”                             <ul style="list-style-type: none"> <li>○ “CHP+ member calls to schedule Well-Child Visit...”</li> <li>○ “Pre-Visit Planning (PVP) by MA confirms age range focus and identifies WCV need”</li> <li>○ “Member is highlighted on PVP to notify Care Team and Provider.”</li> <li>○ “Care Team/Provider discussion with member to switch to a WCV or to Schedule a WCV”</li> </ul> </li> </ul>
